

## Optical transmitter

POLYTRON's optical transmitters are designed to build optical distribution systems. The optical transmitters operate with a distributed feedback laser. The senders' control is managed via buttons and a LC display in front of the device. The output power is 4, 8 resp. 20 mW.

- DFB-laser, wavelength 1310 nm ( $\pm 10$ )
- modulation: direct light intensity modulation
- optical connectors: FC-ACF / FC-SCP
- graphical LC display
